

DISPLAY METHOD AND APPARATUS FOR NAVIGATION SYSTEM

Abstract of the Disclosure

5 A display method and apparatus for a navigation system
continuously provides the user the predetermined type of
information, typically, the route to the destination even
when the user changes the screen to any type of screen in the
middle of the route guidance mode. The display method is
comprised of the steps of starting a route guidance mode for
10 guiding a user to a destination, detecting whether a user has
changed to a new screen different from that in the route
guidance mode, determining whether the user has reached the
destination, displaying a route guidance screen within the
new screen when the user has not reached the destination.
